

PRIVATE EAR WAX REMOVAL SERVICES

Microsuction for Ear Wax Removal
provided by
Mr. Piotr Swiatek (Clinical Audiologist &
Registered Hearing Aid Dispenser)

EAR WAX

It doesn't usually cause problems, but if too much is produced it can lead to a blocked and painful ear or hearing loss. It can also affect the operation of hearing aids, causing them to whistle and reduce the quality of sound.

MICROSUCTION

It is a safe and comfortable method of earwax removal. A microscope and a finely balanced medical suction device is used to remove the ear wax. The fact that we can clearly see the ear canal and what we are doing makes it exceptionally safe. With no liquids involved it is especially comfortable for the patient and it is usually undertaken in a few minutes. A typical appointment to remove wax from both ears should take no longer than 30 minutes.
